Valve Cover Conversion Kit with Flange Safety Device for Spark Plug Leads

For MAN® E32 Gas Engines Series

With sales bulletin VM 16 08 I/G (2nd supplement of October 9, 2017) MAN® informed about the valve cover modification for all E32 series engines to lock the spark plug leads. The new safety concept consists of a modified valve cover and two locking devices and therefore needs special spark plug leads. These leads must be equipped with an additional groove, in which the two locking devices can fully engage into in order to fix the spark plug lead on the valve cover.

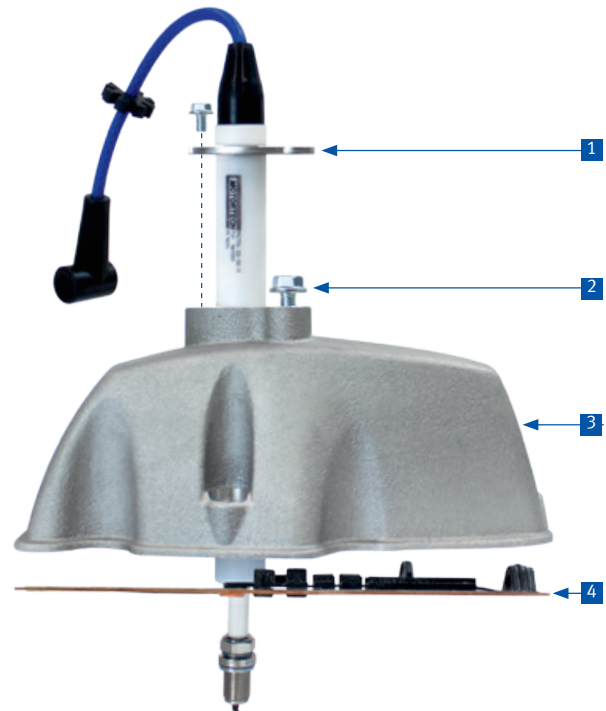

To fit the new safety concept, MOTORTECH offers suitable PolyMot™ spark plug leads to use with different spark plug types. These will also be part of MOTORTECH's ignition systems for all E32 series engines in the future.

For recommended retrofitting of already operating engines without safety devices, MOTORTECH also offers an appropriate valve cover conversion kit including all components for an easy conversion:

- 1 Safety flange for spark plug lead
- 2 Hexagon head screws for fixing the flange on the valve cover
- 3 Valve cover with flange support
- 4 Valve cover gasket

More information about the valve cover conversion kit is available at www.motortech.de/download-centere.html
