7.7 Instructions for Packaging the Equipment .......................................................... 46  
8.1 Maintenance Instructions ...................................................................................... 47  
8.2 Spare Parts and Accessories ................................................................................. 47  
9 Index ........................................................................................................................ 48
Prior to use, read these assembly instructions carefully and familiarize yourself with the product. Installation and start-up should not be carried out before reading and understanding this document. Keep these assembly instructions readily available so that you can reference them as needed.

1.1 What Is the Purpose of these Assembly Instructions?
These assembly instructions serve as an aid for the installation of the product and support the technical staff with all maintenance tasks to be performed. Furthermore, these instructions are aimed at preventing dangers to life and health of the user and third parties.

1.2 Who Are these Assembly Instructions Targeted to?
These assembly instructions provide a code of conduct for personnel tasked with the setup, operation, maintenance, and repair of gas engines. A certain level of technical knowledge with respect to the operation of gas engines and basic knowledge of the electronic components used are necessary. Persons who are only authorized to operate the gas engine shall be trained by the operating company and shall be expressly instructed concerning potential hazards.

1.3 What Symbols Are Used in the Assembly Instructions?
The following symbols are used in these instructions and must be observed:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="example.png" alt="Example" /></td>
<td>Example: This symbol indicates examples, which point out necessary handling steps and techniques. In addition, you receive additional information from the examples, which will increase your knowledge.</td>
</tr>
<tr>
<td><img src="notice.png" alt="Notice" /></td>
<td>Notice: This symbol indicates important notices for the user. Follow these. In addition, this symbol is used for overviews that give you a summary of the necessary work steps.</td>
</tr>
<tr>
<td><img src="warning.png" alt="Warning" /></td>
<td>Warning: This symbol indicates warnings for possible risks of property damage or risks to health. Read these warning notices carefully and take the mentioned precautionary measures.</td>
</tr>
</tbody>
</table>

1 General Information

Danger
This symbol indicates warnings for danger to life, especially due to high voltage. Read these warning notices carefully and take the mentioned precautionary measures.

1.4 Which Abbreviations/Acronyms Are Used in the Assembly Instructions?
The following abbreviations/acronyms are used in the assembly instructions:

<table>
<thead>
<tr>
<th>Abb.</th>
<th>Term</th>
<th>Description</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>CE</td>
<td>Conformité Européenne</td>
<td>Conformity with EU directives</td>
<td>Mark based on EU legislation for certain products in conjunction with product safety</td>

2.1 General Safety Instructions
MOTORTECH equipment is manufactured as state of the art and therefore safe and reliable to operate. Nevertheless the equipment can cause risks or damage can occur, if the following instructions are not complied with:

– The gas engine must only be operated by trained and authorized personnel.
– Observe all safety instructions of the system and all safety instructions of the system operator.
– Operate the equipment only within the parameters specified in the technical data.
– Use the equipment correctly and for its intended use only.
– Never apply force.
– For all work such as installation, conversion, adaptation, maintenance, and repair, all equipment must be disconnected from the mains and secured against unintentional reactivation.
– Perform only such maintenance and repair work as is described in these assembly instructions, and follow the instructions given while working.
– Only use spare parts supplied by MOTORTECH for the maintenance of the device.
– Further work must only be performed by personnel authorized by MOTORTECH. Non-compliance with the instructions will void any warranties for the proper function of the equipment as well as the responsibility for the validity of the certifications.
– Safety devices must not be dismounted or disabled.
– Avoid all activities that can impair the function of the equipment.
– Operate the equipment only while it is in proper condition.
– Investigate all changes that occur during operation of the gas engine or electronic engine control.
– Ensure compliance with all laws, directives, and regulations applicable to the operation of your system, including such not expressly stated herein.
– If the system is not entirely tight and sealed, gas may escape and result in explosion hazard. The inhalation of gas can also lead to death or severe health damages. Therefore, upon completion of all assembly works, always check the system’s tightness.
– Always ensure adequate ventilation of the engine compartment.
– Ensure a safe position at the gas engine.
– There is a risk of burning on hot surfaces. Allow the gas engine to cool down before starting any work.
– Personal protective equipment (PPE), e.g. safety shoes and gloves, must be worn during all work on the gas engine.
– Noise from the system can cause permanent or temporary damage to your hearing. Wear suitable hearing protection at the system.
– Your behavior can reduce possible residual risks to a minimum. Observe responsible handling of the gas engine and the gas-carrying system.
2 Safety Instructions

2.2 Electrostatic Discharge Hazards
Electronic equipment is sensitive to static electricity. To protect these components from damage caused by static electricity, special precautions must be taken to minimize or prevent electrostatic discharge.

Observe these safety precautions while you work with the equipment or in its vicinity.

– Before performing maintenance or repair work, ensure that the static electricity inherent to your body is discharged.
– Do not wear clothing made from synthetic materials to prevent static electricity from building up. Your clothing should therefore be made of cotton or cotton mix materials.
– Keep plastics such as vinyl and Styrofoam materials as far away from the equipment as possible.
– Do not remove the circuit boards from the housing of the device.

2.3 Special Safety Instructions for the Device

Gas! Danger to life!
Leaking gas may cause death or serious health damage if inhaled. Upon completion of all assembly works, always check the system's tightness. When operating a VariFuel gas mixer, make sure that the gauge ports are closed.

All works involving gas-carrying parts must be executed by trained personnel only.

Explosion hazard!
If the system is not entirely tight and sealed, gas may escape and result in explosion hazard. Upon completion of all assembly works, always check the system's tightness.

All works involving gas-carrying parts must be executed by trained personnel only.

Explosion hazard!
Do not disconnect any connectors while the system is live. If the system is located in a hazardous area, there is a risk of explosion.

2 Safety Instructions

### 2.4 Proper Transport
Transport the VariFuel2/2+ to the installation site unopened in its original carton.

### 2.5 Proper Storage
Clean the VariFuel2/2+ gas mixer before storing. Store the VariFuel2/2+ gas mixer in a dry and clean place on even ground. For storage, place the VariFuel2/2+ upright on the flat support surface on the underside of the device.

### 2.6 Proper Disposal
After the expiration of its service life, MOTORTECH equipment can be disposed of with other commercial waste, or it may be returned to MOTORTECH. We will ensure its environmentally friendly disposal.
3.1 Functional Description
All graphics used in this section represent an example of a VariFuel2/2+ series 200-120.

Basic Design
The main task of the gas mixer is to mix the fuel (gas) and the air so that an optimal combustion is ensured within the gas engine. Here, the decisive optimization parameters are a high degree of efficiency and low emissions that comply with relevant regulations.

In the VariFuel2/2+, gas and air are mixed based on the Venturi principle. Based on the suction pressure of the engine, the air is sucked in through the air inlet $a$ into the Venturi nozzle. This creates an underpressure at the most narrow place, which causes the gas to be sucked in through the gas inlet $b$. In this way, both the gas and the air are mixed and released at the mixture outlet $c$. The volume flow and thus the air/gas mixture can be adapted to the respective engine by using different design sizes and different flow bodies in the Venturi nozzle.
3 Intended Use

Mixture Control
The fuel (gas) is guided into the nozzle using the adjustable rectangular openings in a fuel ring d, which are wedge-shaped in the VariFuel2+. The openings of the fuel ring are adjusted by a stepper motor and a drive belt e. The stepper motor of the VariFuel2/2+ is controlled by a stepper motor driver. This can process the signals of a master control.

Connections
All VariFuel2/2+ gas mixers also have the following connections:

– An impulse line connection for connecting the air inlet to a balance or zero pressure regulator
– A gauge port for measuring the gas pressure at the gas inlet by a pressure gauge
3.2 Applications

**Danger of interference with radio reception!**

The device is not intended for use in residential areas and cannot ensure adequate protection of radio reception in such environments.

All VariFuel2/2+ air/gas mixers are designed for use with gas-powered Otto engines. The following substances are approved as fuels:

- Natural gas, biogas, landfill gas, sewage gas, wood gas, drilling-related gas, mine gas, liquefied natural gas (LNG), liquefied petroleum gas (LPG)
- Additional special gases may be used upon approval (there may be restrictions in the case of excessive moisture content or foreign materials in the gas such as tar)

Mixing the air and fuel with the VariFuel2/2+ must be done with the same pressure, therefore it is necessary to use a balance or a zero pressure regulator within the gas train.

The VariFuel2/2+ can mix up to two gases with air. For lean gas applications (such as wood or landfill gas) with a V-engine, it is possible to interconnect two VariFuel2/2+ to achieve the desired mixing ratio.

If two VariFuel2/2+ gas mixers are to be used, two VariStep3 stepper motor drivers are required. An additional splitter is not necessary.

Any use other than the one described in the assembly instructions shall be considered improper use and will result in the voiding of all warranties.
3 Intended Use

4 Product Description

4.1 Technical Data

4.1.1 Certifications

The VariFuel2/2+ air/gas mixers are certified as follows:

CE

Machinery Directive

– The VariFuel2/2+ air/gas mixers are partly completed machinery according to article 2g of the EC Machinery Directive.

– The partly completed machine may only be commissioned once it has been established that the machine into which the product mentioned above should be incorporated complies with the provisions of the EC Machinery Directive.

– The following standards were considered:

  – EN ISO 12100 – Safety of machinery - General principles for design - Risk assessment and risk reduction

  – EN 60204-1 – Safety of machinery - Electrical equipment of machines - Part 1: General requirements

EMC Directive

– EN 55011 – Industrial, scientific and medical equipment - Radio-frequency disturbance characteristics - Limits and methods of measurement

  – Group 1, Class A

– EN 60034-1 – Rotating electrical machines - Part 1: Rating and performance

– EN 61000-6-2 – Electromagnetic compatibility (EMC) - Part 6-2: Generic standards - Immunity for industrial environments

The Declaration of Incorporation and the EU Declaration of Conformity of your VariFuel2/2+ are enclosed with your product.
### 4.1.2 Mechanical Data

You can find the assignment of the connectors on the stepper motor and encoder in the section Pole Connector Stepper Motor/Encoder on page 26.
# 5 Installation Instructions

## 5.1 Unpacking
Unpack the device, taking care not to damage it, and ensure that the assembly instructions are always stored with the device and are easily accessible. Check the contents for completeness and verify that the device type meets your application requirements.

---

**Risk of destruction due to electrostatic discharge!**

The VariStep3 stepper motor driver may only be installed by specialized personnel who has been trained in handling ESD sensitive components and with due regard to relevant ESD standards. It must be installed into a control cabinet, and it must comply with the ESD standard IEC 61340-5-1:2016. Damage caused by electrostatic discharge is not covered by warranty.

---

### Scope of Supply
The scope of supply of the VariFuel2/2+ air/gas mixer consists of the following components:

- VariFuel2/2+ air/gas mixer
- Gasket for mixture outlet flange
- Assembly instructions
- Declaration of Incorporation
- EU Declaration of Conformity

### Accessories
- Flow body
- Optional: Mounting flanges for gas inlet and mixture outlet
- Connection cable for connection between VariFuel2/2+ and VariStep3 stepper motor driver
- VariStep3 stepper motor driver incl. configuration software and USB interface cable
5.2 Assembly

Risk of destruction!

The stepper motor of the VariFuel is not suitable for carrying or lifting a gas mixer. There is a danger that the stepper motor could break, and if the gas mixer were to fall, it could result in injury or property damage.

Always carry or lift the gas mixer by its exterior housing.

The following steps must always be carried out and are specified in more detail in the following:

– Install flow body
– Install VariFuel2/2+ into intake section (air and gas inlet plus mixture outlet)
– Connect stepper motor driver
5 Installation Instructions

For optimum performance according to its design, it is important that air and fuel are mixed in the VariFuel2/2+ at the same pressure. Therefore, only operate the VariFuel2/2+ gas mixer with a balance or zero pressure regulator. The balance or zero pressure regulator must be connected to the impulse line connection of the VariFuel2/2+ and it must be installed in the gas train at a suitable position before the gas inlet of the VariFuel2/2+.

</tr>
</tbody>
</table>
5.2.1 Install Flow Body

**Explosion hazard! Risk of destruction!**

The self-locking nut of the flow body secures itself against loosening by buckling a plastic ring in the slot of the nut by force-fit after tightening. If the self-locking nut is loosened, the plastic ring buckles again, so that the nut can no longer be securely tightened. If the flow body were to fall apart due to the use of a no longer securable nut, parts of the system will be destroyed and it could cause an explosion.

For the safe operation of the VariFuel2/2+, observe the following guidelines:

- The self-locking nut is pre-mounted on unused MOTORTECH flow bodies. For installation, the self-locking nut may be removed one time, and then used only one time for secure attachment.

- Under no circumstances may the used self-locking nut be used again in the event of flow body replacement.
5 Installation Instructions

To install or replace the flow body, free access must be provided at the VariFuel2/2+ both on the air inlet and on the mixture outlet.

Proceed as follows:

Illustration example

1. A label is enclosed with the flow body. Stick this label onto the field *Label Flow Body Size* of the VariFuel2/2+ nameplate. So you can determine the flow body size if the gas mixer is installed.
5 Installation Instructions

2. First, completely disassemble the flow body by unscrewing the self-locking nut and disconnecting the two body halves.

3. To install the flow body, first slide the round half over the central nozzle ring on the air inlet side. Note that the smallest flow body (ø 23 mm/0.9”) cannot be put on the central nozzle ring, but must be put in front of it.

4. On the mixture outlet side, put the second half of the flow body over the threaded rod of the first half and the central nozzle ring.

5. Secure the threaded rod with the self-locking nut. Apply the adequate torque:
   - Flow bodies made of aluminum: 5 Nm (3.7 lb-ft)
   - Flow bodies made of thermoplastic material: 3 Nm (2.2 lb-ft)

5.2.2 Install VariFuel2/2+ into Intake Section

The mounting position of the VariFuel2/2+ gas mixer is arbitrary. For mounting, use the four threaded holes and the flat surface on the bottom side of the device.

The following must be observed during installation:

- The VariFuel2/2+ must be mounted tension-free, i.e. all bores of the flanges must be aligned with the housing bores.
- For the mixture outlet, consider the additional depth of the engine-specific mounting flange.
- With series 300 and 350, you can mount ring eyelets for lifting the VariFuel2/2+ into the provided threaded holes, if necessary.
- For the air inlet, gas inlet and mixture outlet, use only galvanized hexagon bolts.
- Tighten the screws firmly enough so that all connections are gas-tight. Use a suitable torque that matches the strength of the screw.
- Ensure that the inspection window on the fuel ring remains freely accessible and is for example not covered by a pipe.
- Take care that the inspection window on the drive belt remains easily available for checking and setting the belt tension.
- During installation, make sure that no loose parts get into the VariFuel2/2+. 
5 Installation Instructions

Generally, you need to connect the following ports:

Illustration example

**Explosion hazard!**
If the system is not entirely tight and sealed, the combustible gas mixture may escape and result in an explosion hazard. Therefore, all ports and connections must be gas-tight. Use suitable clean seals and connecting materials.

**Risk of injury!**
When connecting the cables, your fingers may get stuck. For this reason, under no circumstances should you reach into the openings and gaps of the VariFuel2/2+ gas mixer when connecting the lines.

- **Air inlet**
  Hose connection (e.g. with clamp, seal and counter flange)

- **Gas inlet**
  Flexible gas line connection via a mounting flange. It is particularly important that the gas line is flexible if the gas mixer is rigidly coupled with the engine. Two gas connections are available. If required, the cover can be modified accordingly. For two-gas operation another adapter must be ordered in order to be able to use both gas connections simultaneously.
5 Installation Instructions

- **Mixture outlet**
  Connection via a bolt hole circle for engine specific mounting flange (available with clamp, seal and counter flange)

- **Impulse line connection**
  Connection for the impulse line of the balance or zero pressure regulator for connection to the air inlet of the VariFuel2/2+ (cutting-ring connection, thread size G1/4). For optimum performance in accordance with its design, the VariFuel2/2+ must be operated with a balance or zero pressure regulator (see section Assembly on page 29). The connection is suitable for hoses with an outer diameter of 10 mm (0.4"").

- **Optional: Gauge port**
  Connection for the measuring lead of a pressure gauge to measure the gas pressure at the gas inlet of the VariFuel2/2+ (thread size G1/8). The connection is suitable for hoses with an inner diameter of 8 mm (0.31"").

### 5.2.3 Connect Stepper Motor Driver

**Risk of destruction!**

To rule out the possibility of moving the connected VariFuel2/2+ out of the control area, observe the following procedure when connecting the stepper motor to the VariStep3 stepper motor driver:

1. Configure the VariStep3 stepper motor driver for the desired VariFuel2/2+ gas mixer (see section External Device in the operating manual of the VariStep3 stepper motor driver).
2. Disconnect the VariStep3 stepper motor driver from the power supply.
3. Connect the stepper motor of the VariFuel2/2+ gas mixer to the stepper motor driver.
4. Connect the VariStep3 stepper motor driver again to the power supply.
   - The VariStep3 stepper motor driver initiates a reference run. The VariStep3 stepper motor driver is ready for operation.

To connect the VariStep3 stepper motor driver to the stepper motor of the VariFuel2/2+, read the operating manual of the VariStep3 stepper motor driver.
6 Operation

6.1 Start-up

Explosion hazard!
If the system is not entirely tight and sealed, the combustible gas mixture may escape and result in an explosion hazard. Always check the tightness of the system before start-up. Upon completion of your works, make sure that you close the gauge port on the VariFuel2/2+.

Operational safety!
Contaminated gas can lead to blocking of the fuel ring and thus can cause the gas engine to stop.

Examine the VariFuel2/2+ regularly for contamination as a part of the regular maintenance intervals customary for your system.

Use clean gas preferably.

Basic Settings of the System
With an ideal design, the VariFuel2/2+ gas mixer is operated in a range between 15 % and 80 % of the fuel ring’s opening. In this way the prescribed emission values should be complied with nominal load. For the engine start, additionally program a suitable start position in the master control.

The VariFuel2/2+ gas mixer is a Venturi mixer. For optimum performance according to its design, it is important that air pressure and gas pressure are equal, so that the gas is sucked in by the Venturi effect alone. Therefore, operate the VariFuel2/2+ gas mixer solely with a balance or zero pressure regulator connected to the air inlet of the VariFuel2/2+ via the impulse line connection of the VariFuel2/2+. Also, adjust the balance/zero pressure regulator in such a way that the balance/zero pressure regulator equalizes the gas pressure with the air pressure. Otherwise, if the connection or adjustment is incorrect, the gas will be forced into the gas mixer and not sucked in alone, which can lead to a performance loss.

Problems When Starting
Often the gas engine’s problem is its starting performance. With the starting speed the air speed in the gas mixer is very low, which will cause very low suction pressure at the gas inlet. This can lead to not enough gas being sucked into the engine to make the mixture ignite. The following procedures may be helpful:

– MOTORTECH recommends to start with an opening of the fuel ring of 30 % to 35 %. If the engine does not start, open the fuel ring in steps of 1 to 2 %.
6 Operation

For gases with low fuel value, it may be necessary to set the balance/zero pressure regulator to a slight overpressure (max. 5 mbar for starter speed) for the engine start phase. Do not set the overpressure too high, because too much gas content in the engine can lead to start problems. As soon as the engine is running, set the balance/zero pressure regulator back to pressure balance in idle at nominal speed. This setting guarantees that adequate suction pressure exists at the gas inlet at engine start.

Other reasons may be that, for example, the nominal diameter of the flexible gas line is smaller than that of the gas mounting flange or the diameter of the gas mounting flange is too small to discharge sufficient gas into the engine at low suction pressure. Check in any case whether the gas supply of your VariFuel2/2+ gas mixer is sufficiently dimensioned. If you have any questions, contact MOTORTECH (see Customer Service Information on page 46).

Engine Does Not Reach Nominal Power

With the prescribed emissions, the engine does not reach its nominal output. The following scenarios might be possible:

Scenario 1:

- The opening of the fuel ring is in the range between 15 % and 80 %.
- The nominal output is reached by enriching the mixture.
- At the gauge port of the VariFuel2/2+, an underpressure greater than 30 mbar is measured.

In this case, it is necessary to increase the air supply. This can be achieved based on the following measures:

- Check air filter for dirt or excessive back pressure. Clean or replace air filter if necessary.
- Check underpressure in the air intake line (standard value: –5 mbar to –25 mbar)
- Install a smaller flow body. To do so, please contact MOTORTECH (see Customer Service Information on page 46).

Scenario 2:

- The opening of the fuel ring is > 95 %
- The nominal output is not reached by enriching the mixture.
- An underpressure less than 60 mbar is measured at the gauge port of the VariFuel2/2+.

In this case, it is necessary to increase the gas supply. This can be achieved by carrying out one of the following measures:

- Install larger flow body
- Use larger gas mounting flange.

To do so, please contact MOTORTECH (see Customer Service Information on page 46).
7.1 Special Tools for Troubleshooting

Special tools have been developed at MOTORTECH which are needed to carry out certain work safely and conveniently for the maintenance and repair of VariFuel2/2+ gas mixers. The following tools can be obtained from MOTORTECH:

- **VariFuel Locking Tool for Toothed Pulley**
  With this tool, you lock the toothed pulley of a VariFuel2/2+ gas mixer to tighten or loosen the hexagon socket head cap screw with which the toothed pulley is attached to the shaft.

- **VariFuel Tool for Inspection Window**
  You use the VariFuel Tool for Inspection Window to mount and dismount the inspection window on the upper part of the VariFuel2/2+ housing.

- **VariFuel Adjustment Tool for Belt Tension**
  The VariFuel Adjustment Tool for Belt Tension is ideal for adjusting the tension of the drive belt of a VariFuel2/2+ air/gas mixer.

The tools are supplied with brief operating instructions, which must be taken into account during use.

7.2 Possible Faults

**Explosion hazard!**

If the system is not entirely tight and sealed, the combustible gas mixture may escape and result in an explosion hazard.

The device's tightness is checked and guaranteed by MOTORTECH after production.

If the device is opened by the customer for installation or maintenance purposes, the customer is responsible for restoring the system's leak tightness.

If the customer cannot guarantee this, the device must not be opened and must be replaced and returned to MOTORTECH to remedy any failures.
## Troubleshooting

7 Errors

7.3 Fix Shaft
All graphics used in this section represent an example of a VariFuel2/2+ series 200-120.

To fix the shaft between stepper motor and VariFuel2/2+, the stepper motor must be completely dismounted. The explosion view provides information on how the stepper motor has been installed.

Dismounting
1. Remove the inspection window in the upper part of the housing with the VariFuel Tool for Inspection Window. For this purpose read the instructions of the VariFuel Tool for Inspection Window.
2. Remove the adapter plate with the stepper motor as well as the O-ring from the housing of the VariFuel2/2+.
3. Disconnect the toothed pulley from the shaft of the stepper motor.
4. Remove the adapter plate from the stepper motor.
5. Loosen the set screw from the shaft.
Installation

1. Moisten the set screw \(^1\) with thread lock fluid.

2. Replace the shaft \(^2\) on the axis of the stepper motor \(^3\) and tighten the set screw with the torque stated in the following drawing.

**Alignment and positioning of the shaft**

Observe the following while positioning the shaft.

- The drill hole in the shaft must be aligned with the flattening of the axle.
- The shaft must be 1 mm from the stepper motor.

3. Moisten the shaft seal ring \(^4\) with silicone spray.

4. Press the shaft seal ring \(^4\) with the flat side first into the adapter plate.

5. Moisten the hexagon socket head cap screws M5x12 \(^5\) with thread lock fluid.
6. Screw the adapter plate to the stepper motor and place the toothed pulley on the shaft.  

**Observe alignment of the adapter plate and the stepper motor**  
Align the adapter plate as shown in the illustrations.  
When aligning the stepper motor, observe the guide nose in the stepper motor connection plug. Align the stepper motor so that you can connect the wiring harness optimally to the stepper motor.

7. Attach the toothed pulley with the washer and the hexagon socket head cap screw M₄x₁₆ to the shaft of the stepper motor.  

**Do not tighten the screw**  
Do not tighten the hexagon socket head cap screw M₄x₁₆. The toothed pulley must be rotatably mounted on the shaft to allow the fuel ring to be adjusted.

8. Insert the O-ring into the housing of the VariFuel2/2+.
9. Attach the stepper motor with the hexagon socket head cap screws M6x16 of the adapter plate to the VariFuel2/2+.

Do not tighten the screws

Do not tighten the hexagon socket head cap screw M6x16. The stepper motor has to remain movable to enable the correct belt tension to be set.

10. Tighten the drive belt with the VariFuel Adjustment Tool for Belt Tension as described in the supplied instructions for use.

   ▶ The stepper motor has been installed. You can continue with the adjustment of the fuel ring (see Adjust Fuel Ring on page 44).

7.4 Adjust Fuel Ring

In order to adjust the fuel ring, the VariFuel2/2+ must be connected with the VariStep3 stepper motor driver. Adjust the fuel ring as follows:

1. Stop the gas supply.

2. Remove the inspection window from the upper part of the housing with the VariFuel Tool for Inspection Window. Proceed as described in the instructions for use of the inspection window tool.

3. In the upper part of the housing, loosen the toothed pulley with the Varifuel Locking Tool for Toothed Pulley and a hex key SW3. Proceed as described in the instructions for use of the locking tool. After loosening, keep the locking tool inserted in the toothed pulley.
4. If not already done, connect the stepper motor to the VariStep3 stepper motor driver. For this purpose, read the VariStep3 operating manual.

5. Move the stepper motor into the closed position.

6. Rotate the reference scale of the fuel ring into the lateral inspection window of the VariFuel2/2+ by moving the fuel ring via the VariFuel locking tool that has been inserted into the toothed pulley in step 3. Adjust the closed position of the fuel ring in this way so that the reference marking A points to the uppermost line B of the reference scale. After adjusting, keep the locking tool inserted in the toothed pulley.

7. Fasten the toothed pulley to the shaft with the hexagon socket head cap screw M4x16, a hex key SW3 and the VariFuel Locking Tool for Toothed Pulley as described in the locking tool instructions for use. Use a tightening torque of 2.5 Nm (1.9 lb-ft).

---

**Conduct in the event of an error message**

If you move the stepper motor while tightening the screw, you will get an error message from the VariStep3 stepper motor driver. Confirm this via the MICT.

---

8. Initiate a reference run with the VariStep3 stepper motor driver.
   - The fuel ring has been adjusted and the stepper motor approaches all positions correctly again.

9. Close the inspection window in the upper part of the housing with the VariFuel Tool for Inspection Window.
7.5 Customer Service Information
You can reach our customer service during business hours at the following phone and fax number, or by email:

Phone: +49 5141 93 99 0
Fax: +49 5141 93 99 99
Email: service@motortech.de

7.6 Returning Equipment for Repair / Inspection
To return the device for repair and inspection, obtain a return form from your MOTORTECH contact person (see Customer Service Information on page 46).

After you have completely filled out the return form and returned it to MOTORTECH, MOTORTECH will send you back the return form and a delivery note with RMA number specified. Enclose the return form with your device and attach the delivery note to the packaging so that it is clearly visible from the outside. This will ensure a speedy and smooth processing of your repair order.

Send the device with delivery note and return form to one of the two addresses below or to the nearest MOTORTECH representative:

MOTORTECH GmbH
Hogrevestr. 21–23
29223 Celle
Germany
Phone: +49 5141 93 99 0
Fax: +49 5141 93 99 98

7.7 Instructions for Packaging the Equipment
For return shipment, equipment should be packaged as follows:

– Use packaging material that does not damage the equipment surfaces.
– Wrap the equipment with sturdy materials and stabilize it inside the packaging.
– Use sturdy adhesive film to seal the packaging.
8.1 Maintenance Instructions

**Explosion hazard!**

If the system is not entirely tight and sealed, the combustible gas mixture may escape and result in an explosion hazard.

The device's tightness is checked and guaranteed by MOTORTECH after production.

If the device is opened by the customer for installation or maintenance purposes, the customer is responsible for restoring the system's leak tightness.

If the customer cannot guarantee this, the device must not be opened and must be replaced and returned to MOTORTECH to remedy any failures.

Observe the following maintenance instructions:

- A visual inspection of the gas mixer must be carried out every time the engine is serviced within the normal service intervals of your system. The visual inspection includes:
  - Checking the fuel ring for dirt. For having the VariFuel2/2+ cleaned, contact your MOTORTECH contact person (see Customer Service Information on page 46).
  - Checking the drive belt for signs of material fatigue (e.g. cracks)
- MOTORTECH offers cleaning, for this purpose send in your gas mixer (see Returning Equipment for Repair / Inspection on page 46).
- All maintenance works which require opening the VariFuel2/2+ (such as adjusting the fuel ring) must only be carried out by personnel trained by MOTORTECH.
- Dirty seals (e.g. flat gaskets, O-rings) can lead to leakage of the VariFuel2/2+. When replacing seals, only use clean seals from MOTORTECH (part of MOTORTECH repair kits).
- Spare parts (e.g. drive belt, fuel ring) are available from MOTORTECH as repair kits. Always use these repair kits, otherwise a proper functionality cannot be guaranteed.
- If a safe repair cannot be carried out, since the gas tightness cannot be tested for example, the device must be returned to MOTORTECH (see Returning Equipment for Repair / Inspection on page 46). If needed, a replacement or exchange device can be provided. For this purpose, contact your MOTORTECH contact person (see Customer Service Information on page 46).

8.2 Spare Parts and Accessories
