PolyMot™ Spark Plug Leads and Extensions

Components and Material Improvements

MOTORTECH's PolyMot™ spark plug leads and extensions were globally patented in 1996. Since then more than one million spark plug leads and extensions were manufactured to this design. With the knowledge gathered in ignition control and ignition coil research and manufacturing, a lot of the details were implemented into these products.

As part of our continuous improvement process, MOTORTECH has made adjustments to the PolyMot™ spark plug leads and extensions to make the products even more reliable. The improvements only affect the internal components and are not visible from the outside nor affect the electrical behaviour. The external dimension of the PolyMot™ spark plug leads and extensions remain unchanged, therefore they are fully compatible and exchangeable with the current design. The MOTORTECH part numbers will not be changed.

The changeover to the improved ignition cables will be implemented gradually in the next few weeks.

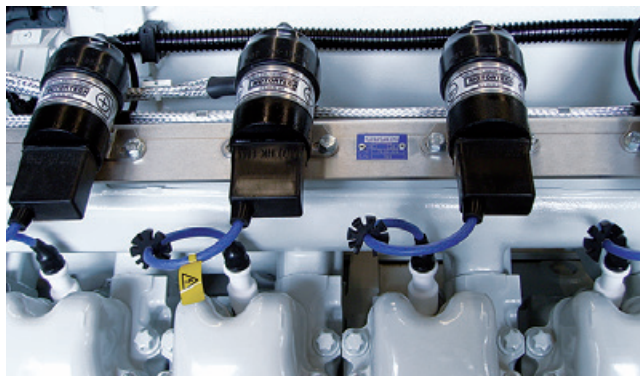

PolyMot™

MOTORTECH SPARK PLUG LEADS & EXTENSIONS

Advantages

- Use of new materials improves protection against corrosion
- Optimized connections to protect against failures
- Extended service life proven in a wide range of field tests, especially in heavy-duty applications

DISTRIBUTION

Customers / others	Yes
Representatives and Sales Partners	Yes
OEM partners	Yes
MOTORTECH subsidiaries	Yes
