

# DENSO<sup>®</sup> Spark Plug Modifications

## Effective Immediately for all Spark Plug Types

DENSO<sup>®</sup> Spark Plugs are made as quality and technology driven products. As one of the world's biggest suppliers of high-quality automotive spark plugs, DENSO<sup>®</sup> is reaching the highest standard by continuous improvement.

The latest improvement is a change to the material composition of the alloy used for the centre electrode chip. DENSO<sup>®</sup>'s new patented alloy allows a reduced diameter centre electrode, which results in consistent or improved operating lifetimes. The changings will also enable better management of future fluctuations in the market of precious metals.

To distinguish the new Spark Plugs from the current range, an underscore has been added to the Spark Plugs description as shown in the photo.

Many of the Spark Plugs affected have already been changed over. In the upcoming months, the remaining Plugs will now be replaced, according to the stock availability of the old variants. If one of your open orders is affected, you will receive a new order confirmation with the following new part numbers:

P/N old version	P/N new version	expected change
GE3-5	GE3-5-267600-0250	Done
GK3-5	GK3-5-267600-0260	Done
GE3-1	GE3-1-267600-0270	From February 2023
