

# PolyMot Spark Plug Leads

## Modification of the Marking Process

MOTORTECH informs about a change in the marking of PolyMot spark plug leads.

In the future, the spark plug leads will be labelled with a wrap-around label that is applied to the ignition cable. The laser labelling on the Teflon will no longer be used.

In order to meet the increasing requirements of quality assurance, a six-digit production batch number will be introduced in addition to the part number and the three-digit production code (year/week).

The new marking process will be introduced gradually and will ultimately be implemented for all Teflon spark plug leads in the MOTORTECH portfolio.

- 1) Part number of the spark plug lead
- 2) 3-digit production code (year/week)
- 3) 6-digit code for production batch
