

Technical Training – Module 4

CHP and Genset Control for Beginners

Our control is a complete CHP or genset controller. The days when you had to link up several control units to a system are a thing of the past. We have integrated all functions, including lean mixture control, into one system with a large separate display. Connect up to 32 modules and connect your plant to the network.

This control unit is on par with a large SPS system but at a much more affordable price!

MAIN TOPICS TRAINING CONTROLS

- > Set up and function of the IntelliSys Gas, AIO.GAS and AIO.NTC controls
- > New features of the IntelliSys Gas base box, introduction to new products
- > IntelliMonitor / GenConfig user software (Basic knowledge for operators and user)

 For the practical exercises it is necessary that each participant brings/keeps a laptop.

 **New Training Center Location:** Hunaeusstrasse 5, 29227 Celle

Target Group

This course is geared to service technicians, operators and CHP operators who are starting to use our control system for the first time and who would like to gain a better understanding of the technical aspects of CHP plant control system.

Our experienced trainers are qualified service technicians who have thorough knowledge about the regular use of the components and provide support on-site on a daily basis.

Objective

Upon successful completion of the training session, participants will be able to use the basic functions of the control unit and identify common faults using the user software.
