

Technical Training – Module 6

CHP and Genset Control – Additions to Module 5

Our control is a complete CHP or genset controller. The days when you had to link up several control units to a system are a thing of the past. We have integrated all functions, including lean mixture control, into one system with a large separate display. Link up to 32 modules and connect your plant to the network. Learn how to program the system yourself!

MAIN TOPICS TRAINING INTELISYS GAS, AIO.GAS AND AIO.NTC

- Advanced power management, MINT applications
- Advanced screen editor for Vision Displays with practical applications

i Prerequisite for participation is the successful completion of module 5 or demonstrable advanced knowledge of the contents of Module 5!

i For the practical exercises it is necessary that each participant brings/keeps a laptop.

Training Center Location: Hunaeusstrasse 5, 29227 Celle

Target Group

This course is geared to commissioning engineers and programmers who would like to gain a better understanding of the technical aspects of CHP plant control.

Our experienced trainers are qualified service technicians who have thorough knowledge about the regular use of the components and provide support on-site on a daily basis.

Objective

Upon successful completion of the training session, participants will be able to program an entire MINT application (multi-module plant) and bring it online.

Final test to achieve the bronze or silver status from the main topics Module 6 to prove the acquired knowledge on request.
